SECTION 01

Executive Summary

GameVerse is a modern gaming discovery platform designed to help players explore, organize, and stay informed about exciting game experiences across multiple genres. This document defines the complete product requirements for the GameVerse MVP — a React.js web application built with a dark futuristic aesthetic and premium UX.

BUDGET	TIMELINE	FRAMEWORK	AUDIENCE
\$150–\$200	7–10 Days	React.js	Ages 13–40

Unlike gaming stores or download platforms, GameVerse focuses exclusively on game discovery, gaming culture, and content exploration. All games featured are original fictional concepts — ensuring full originality and zero copyright conflicts.

SECTION 02

Product Overview & Goals

Mission & Vision

MISSION	Simplify game discovery by creating a centralized destination where gamers can explore, organize, and engage with gaming content.
VISION	Become a trusted platform that helps gamers discover their next favourite gaming experience.

Project Objectives

- Build a premium gaming-themed web experience with immersive dark UI
- Help users discover new game concepts through curated collections and trending lists
- Organize gaming content into easy-to-browse genre and collection categories
- Provide search and filtering capabilities across the game catalog
- Allow users to save favourite games to a persistent local wishlist
- Deliver a fully responsive experience across mobile, tablet, and desktop
- Create a unique GameVerse brand identity inspired by industry-leading gaming platforms

SECTION 03

Target Audience & Personas

Audience Segments

Segment	Primary Need	Key Consideration
Casual Gamer	Browses trending titles, saves wishlist	Mobile-first, quick discovery

PC Gamer	Explores detailed specs & genres	Desktop, information-dense
Console Gamer	Follows new releases & community picks	Platform filters critical
Mobile Gamer	Reads news & community spotlights	Short sessions, responsive UI

Age Demographics

Primary target age group: 13–40 years. The platform must be accessible, visually engaging, and free from adult-only content while still feeling premium and mature enough for older gaming enthusiasts.

SECTION 04

Feature Specifications

4.1 Global Navigation

Nav Item	Purpose
Discover	Main entry to curated game collections and trending content
Collections	Themed groupings of games (Editor's Picks, Hidden Gems, etc.)
Genres	Browse games by category (Action, RPG, Racing, etc.)
Community Hub	Display-only community content and discussions
Newsroom	Gaming news, announcements, and editorial content
Support	Help and FAQ section
Search	Inline search access across game catalog
Wishlist	Access saved games from local storage
Profile	Frontend-only gamer profile page

- Sticky / fixed position — remains visible on scroll
- Responsive mobile hamburger menu for smaller viewports
- Search icon triggers inline search overlay or dropdown

4.2 Hero Showcase

An interactive hero carousel at the top of the homepage highlighting 3–5 featured games. Auto-advances and supports manual navigation.

- Hero artwork / banner image for each slide
- Game title, genre badge, and star rating
- Short description (2–3 lines)
- Prominent 'Explore' CTA button linking to Game Details page
- Slide indicators and prev/next arrow controls (Swiper.js)

4.3 Discover Collections

Curated game collections displayed as horizontal scroll sliders (Swiper.js):

- Editor's Picks
- Story-Driven Adventures
- Open World Experiences
- Competitive Challenges
- Community Favorites
- Hidden Gems

4.4 Genre Explorer

Visual genre grid allowing users to filter by category — all 10 genres using custom artwork cards:

- Action
- Adventure
- RPG
- Racing
- Strategy
- Sports
- Simulation
- Sci-Fi
- Fantasy
- Indie

4.5 Trending Arena

Sub-Section	Description
Trending Games	Real-time ranking of most-viewed titles
Community Favorites	Highest-rated by community votes
Most Viewed Titles	Popularity-sorted listing
Recommended Experiences	Algorithmic / editorial picks

4.6 Play Zone

A dedicated section showcasing future browser-based gaming experiences. All games display 'Coming Soon' status. Clicking a game card triggers a modal popup.

Game	Genre	Description
Memory Matrix	Puzzle / Memory Challenge	Test your memory by repeating increasingly difficult patterns and sequences.
Quiz Quest	Trivia / Knowledge Challenge	Answer gaming-related trivia questions and test your gaming knowledge.
Cyber Runner	Endless Runner	Navigate a futuristic city while avoiding obstacles and collecting energy crystals.

Modal message: "Coming Soon — This gaming experience is currently under development. Stay tuned for future updates from GameVerse."

- Modal must include a close button and dismiss-on-overlay-click behavior
- No actual playable game logic is implemented in this scope

4.7 New Horizons

- Featured artwork with release information
- Star rating and editorial summary
- Genre and platform availability tags

4.8 Future Releases

- Preview artwork / teaser banner
- Release window (e.g., Q3 2025)
- Genre label and platform icons

4.9 Game Details Page

Route: [/game/:id](#)

Component	Content
Overview	Title, description, genre, release info, platform tags
Media Gallery	Screenshots and promotional artwork carousel — exactly 4 screenshots per game
Community Insights	Ratings summary and featured user reviews (static data)
Similar Titles	Related game recommendations

4.10 Wishlist Center

- Add to Wishlist button on every game card and detail page
- Remove from Wishlist functionality
- Dedicated Wishlist page listing all saved games
- Persistence via Browser Local Storage (no backend required)

4.11 Gamer Profile

- Avatar and display username
- Favourite genres badge list
- Wishlist statistics (count, most-saved genre)
- Recently viewed games list
- Frontend-only — no authentication in MVP

4.12 Newsroom

- Industry Updates
- New Announcements

- Community Spotlights
- Feature Articles

4.13 Community Hub

- Popular Discussions (display only)
- Community Recommendations
- Trending Topics
- Featured Games by community vote

Technical Architecture

Technology Stack

Layer	Technology
Frontend Framework	React.js (functional components + hooks)
Language	JavaScript ES6+
Markup / Styling	HTML5 + SCSS / CSS3
Animation	Framer Motion
Carousel / Slider	Swiper.js
Icons	React Icons
Routing	React Router DOM v6
Data Layer	Local JSON files (static data)
Persistence	Browser Local Storage (wishlist only)
Version Control	GitHub
Deployment	Vercel

Supported Browsers

Chrome, Edge, Firefox, Safari — latest versions. The platform must function correctly across all four browsers at mobile, tablet, and desktop breakpoints.

Allowed Tech Stack

- 1. React.js (Create React App or Vite)
- 2. SCSS / CSS3 (CSS Modules or global SCSS with BEM)
- 3. React Icons, Swiper.js, Framer Motion, React Router DOM v6
- 4. Local JSON for data
- 5. Browser Local Storage

Not Allowed

- ✗ Backend servers, databases, or authentication systems
- ✗ Paid UI component libraries or premium plugins (MUI Pro, AG Grid Enterprise, etc.)
- ✗ Game engines (Phaser, Three.js for gameplay, Unity WebGL)
- ✗ Hardcoded game data inside components — must use JSON files
- ✗ Direct copying of layouts or branding from existing gaming platforms (Steam, Epic, IGN, etc.)
- ✗ Actual playable game logic (Play Zone is display + modal only)

Tool Requirements

Requirement	Details
Required	VS Code or equivalent, Node.js v18+, npm or yarn, Git
Acceptable alternatives	Any code editor; Vite as an alternative to CRA
Forbidden	Premium React component libraries, game engines (Phaser, Three.js for gameplay, Unity WebGL)

Code Quality Rules

- Each component file must be under 200 lines
- All hex color values stored in SCSS variables — no hardcoded hex in component files
- Sensibly organized folder structure (see Data Management section)
- Clean, documented codebase with commented components

Architecture Principles

- Component-based architecture — reusable, isolated UI components
- Static data first — all game data served from local JSON for MVP speed
- No backend / API — fully client-side, deployable on Vercel static hosting
- Local Storage — wishlist state persisted between sessions without auth
- Responsive design — mobile-first CSS with breakpoints for tablet and desktop
- Framer Motion — page transitions and micro-interactions for premium feel

SECTION 06

Design System

Color Palette

Color mode: **sRGB**. All colors must be specified and rendered in the sRGB color space.

■	Role / Name	Hex	Usage
■	Primary — Electric Violet	#7C3AED	CTAs, active states, highlights, key UI elements
■	Secondary / Background — Dark Navy	#111827	Page background, cards
■	Accent — Cyan	#06B6D4	Badges, secondary highlights, hover glows
■	Surface / Card BG — Deep Gray	#1F2937	Component backgrounds
■	Text Primary — White	#FFFFFF	Body text on dark backgrounds
■	Text Secondary — Muted Gray	#9CA3AF	Metadata, captions, secondary labels

Color Usage Rules

- 1. Primary (#7C3AED) is used for CTAs, active states, highlights, and key UI elements.
- 2. Accent (#06B6D4) is used for badges, secondary highlights, and hover glows.
- 3. Background surfaces must remain dark (#111827 or #1F2937) — no light-mode treatment anywhere.
- 4. Gradients using the primary and accent colors are permitted for hero artwork overlays and section transitions.
- 5. Modal overlay background: rgba(0, 0, 0, 0.75).

Typography

Font	Weight(s)	Usage	Notes
Orbitron	Bold, ExtraBold	Headings, game titles, section titles, nav brand	All caps acceptable for section titles
Poppins	Regular, Medium, SemiBold	Body copy, UI labels, descriptions, nav items, modal text	Primary readable font

Both fonts must be loaded via **Google Fonts**.

Font Restrictions

- ✗ System default fonts must not be used as primary UI fonts
- ✗ Serif fonts are not permitted anywhere on the platform
- ✗ Handwritten or brush fonts are not permitted

Typographic Hierarchy Ratios

The following ratios define visual hierarchy and must be applied throughout all pages:

Element	Rule	Minimum at 16px body
H1 — Page / Hero Titles	$\geq 2.5\times$ body text font-size	$\geq 40\text{px}$
H2 — Section Titles	$\geq 1.75\times$ body text font-size	$\geq 28\text{px}$
H3 — Card / Sub-section Titles	$\geq 1.25\times$ body text font-size	$\geq 20\text{px}$
Body — Desktop / Tablet	16px baseline	16px
Body — Mobile	14px minimum	Never below 14px on mobile

Spacing System

Base unit: 8px. All margins, paddings, and gaps must be multiples of 8px (8, 16, 24, 32, 40, 48, 64 ...).

Context	Mobile ($\geq 320\text{px}$)	Tablet ($\geq 768\text{px}$)	Desktop ($\geq 1280\text{px}$)
Section Vertical Padding	24px	40px	64px
Card Gutters	16px	24px+	24px+
Content Max-Width	100% – 16px sides	100% – 24px sides	1440px – 24px+ sides

Dimensions & Sizing

Element	Specification
Breakpoints	Mobile $\geq 320\text{px}$ · Tablet $\geq 768\text{px}$ · Desktop $\geq 1280\text{px}$
Hero Section	Full viewport width, minimum 500px height on desktop
Game Cards	280px $\times$ 380px desktop; fluid/responsive on smaller screens
Play Zone Cards	300px $\times$ 400px desktop; fluid/responsive on smaller screens
Modal	Centered, max-width 480px
Modal Overlay	rgba(0, 0, 0, 0.75)
Content Max-Width	1440px, centered; 16px side padding mobile / 24px+ desktop

Design Direction

The GameVerse brand tone is dark, futuristic, and community-driven — achieved through the color palette, typography, spacing system, and visual hierarchy rules defined in the Design System section. The platform must feel premium and immersive without copying any existing gaming platform.

Do — Design Guidelines

- ✓ Use dark, atmospheric backgrounds with subtle texture or gradient overlays.
- ✓ Apply glowing border effects or neon-style highlights on hover using the accent color (#06B6D4).
- ✓ Use bold, large typography for section headings (Orbitron), following the Typographic Hierarchy rules.
- ✓ Apply the 8px Spacing System to create visual breathing room and hierarchy through size, brightness, and spacing.
- ✓ Use card-based layouts with rounded corners and drop shadows.
- ✓ Style Play Zone cards with a distinct 'locked/coming soon' visual treatment (e.g., muted overlay, lock icon, status badge).
- ✓ Keep the modal clean, centered, and consistent with the dark theme.

Do Not — Design Restrictions

- ✗ Use white or light backgrounds anywhere on the platform.
- ✗ Use flat or overly minimal design that does not reflect gaming aesthetics.
- ✗ Copy specific layout structures from Steam, Epic Games Store, or IGN.
- ✗ Use realistic photographs of real games, real people, or copyrighted characters.
- ✗ Use AI-generated imagery of real branded content or IP.
- ✗ Make Play Zone cards look interactive/playable — they must clearly communicate "Coming Soon."
- ✗ Use spacing, margins, or paddings that violate the 8px Spacing System.

Developer's / Designer's Accepted Choices

Decision	Accepted Options
Build tool	Create React App, Vite
SCSS approach	CSS Modules + SCSS, Global SCSS with BEM
Card hover style	Scale + glow, overlay + button reveal
Hero carousel style	Auto-play with dots, auto-play with thumbnails
Genre section layout	Grid cards, horizontal scroll row
Play Zone card style	Muted overlay with lock icon, dimmed with status badge
Modal dismiss behavior	Close button only, close button + overlay click
Image sourcing	AI-generated royalty-free, custom-designed placeholders

Page & Component Inventory

Pages

Page	Key Sections
Home / Discover	Hero, Collections, Trending, Play Zone, New Horizons
Genre Browse	Filtered grid of games by genre
Collections	Curated themed game lists
Game Details	Full game page: info, gallery, reviews, similar — route: /game/:id
Wishlist Center	Saved games from local storage
Gamer Profile	Frontend profile with stats and history
Newsroom	Gaming news and editorial articles
Community Hub	Community content and discussions
Support	FAQ and help content

Shared Components

Component	Description
GameCard	Cover art, title, genre, rating, platform, wishlist toggle
HeroSlide	Full-width banner with overlay and CTA
GenreChip	Clickable genre filter badge
CollectionSlider	Horizontal scrollable Swiper carousel
Modal	Reusable popup (Play Zone, alerts) — Framer Motion animated
NavigationBar	Sticky top nav with search and wishlist
Footer	Links, social icons, brand info
RatingStars	Visual star rating component
PlatformBadge	Icon + label for PC / Console / Mobile
NewsCard	Thumbnail, category tag, title, excerpt

Original Game Catalog

All games are original fictional concepts. No real game titles or copyrighted IP is used. Exactly 10 game concepts — no more, no fewer — using this approved list as the **final source of truth**:

#	Game Title	Genre	Similar Title
1	Shadow Protocol	Action	Crimson Horizon
2	Void Hunters	Action	Cyber Outbreak
3	Eternal Realms	RPG	Arcane Empire
4	Arcane Empire	RPG	Eternal Realms
5	Neon Drift	Racing	Velocity Rush
6	Velocity Rush	Racing	Neon Drift
7	Project Titan	Strategy	Crimson Horizon
8	Mystic Legends	Adventure	Eternal Realms
9	Crimson Horizon	Open World	Mystic Legends
10	Cyber Outbreak	Sci-Fi	Shadow Protocol

All artwork, banners, screenshots, and game covers must be original, AI-generated royalty-free, or custom-designed. Copyrighted or licensed game assets are strictly prohibited.

Data Management

Local JSON Data Structure

File	Content
games.json	Full game catalog — title, genre, description, rating, platform, art path, screenshots, related IDs
playzone.json	Play Zone entries with status: "coming_soon"
collections.json	Collection definitions and associated game IDs
genres.json	Genre list with icon and color metadata
news.json	Newsroom articles — title, category, date, excerpt, image
community.json	Community discussions and featured topics
trending.json	Curated trending / most-viewed game ID lists

Per-Game JSON Required Fields

Each of the 10 game entries must include all of the following fields:

Field	Type / Constraint
id	String — kebab-case slug (e.g. "shadow-protocol")
title	String
genre	String
description	String
rating	Number
platform(s)	Array of strings
release date/window	String
cover image	Image path string
screenshots	Array — exactly 4 screenshot image references
related game IDs	Array of id strings

Newsroom Data Requirement

The Newsroom JSON must include **at least 2 entries per sub-section** across the four sub-sections — minimum **8 entries total**, using static placeholder editorial content written for this project.

Sub-Section	Minimum Entries
-------------	-----------------

Industry Updates	2
New Announcements	2
Community Spotlights	2
Feature Articles	2

Local Storage Schema

Key	Value
gameverse_wishlist	Array of saved game IDs — e.g. ["shadow-protocol", "neon-drift"]
gameverse_recent	Array of recently viewed game IDs (max 10, FIFO)
gameverse_profile	Object with username, avatar, favourite genres

Folder Structure

GameVerse/
public/assets/images/ icons/
src/
components/common/ layout/ PlayZone/
pages/
data/ games.json playzone.json news.json collections.json
styles/ variables.scss global.scss
hooks/ utils/
README.md package.json

SECTION 11

Scope Boundaries / Out of Scope

Timeline — 7–10 Day Milestones

Phase	Focus	Key Deliverables
Days 1–2	Setup & Foundation	Project scaffold, routing, design system, JSON data
Days 3–4	Core Pages	Home (hero, collections, trending), Genre Browse, Game Details
Days 5–6	Secondary Pages	Wishlist, Profile, Newsroom, Community Hub, Play Zone
Day 7	Polish & Animation	Framer Motion transitions, Swiper sliders, responsive QA
Days 8–9	Testing & Fixes	Cross-browser testing, mobile QA, bug fixes
Day 10	Deployment	GitHub push, Vercel deployment, final documentation

In Scope — DO

- ✓ Build all 13 sections/pages described in the scope of work.
- ✓ Build the Play Zone section with 3 game cards and "Coming Soon" modal popups.
- ✓ Use the 10 fictional game concepts listed in Section 09 — do not introduce real game titles or additional/fewer games.
- ✓ Use placeholder or royalty-free/AI-generated artwork for all game covers, screenshots, and banners, per the UI Assets specs in Deliverables.
- ✓ Implement the wishlist using browser local storage.
- ✓ Build a fully responsive layout for mobile, tablet, and desktop.
- ✓ Apply the Spacing System and Typographic Hierarchy rules from Design System throughout.
- ✓ Deploy to Vercel and push source code to a public GitHub repository.

Out of Scope — DO NOT

- ✗ Build any backend, API, database, or server-side functionality.
- ✗ Implement real user authentication, user accounts, or session management.
- ✗ Build actual playable games — Play Zone is a showcase/preview section with modal only.
- ✗ Build real browser-based games, gaming challenges, or event calendars (future expansion — out of MVP scope).
- ✗ Use copyrighted game artwork, branding, logos, or characters.
- ✗ Use paid plugins, libraries, or premium assets.
- ✗ Copy specific layout structures from Steam, Epic Games Store, or IGN.
- ✗ Use AI-generated imagery of real branded content or IP.

Future Expansion Roadmap (Not in MVP)

- User authentication and community accounts
- Personalised game recommendations engine
- Achievement and badge system
- Real browser-based playable games
- Gaming challenges and event calendars
- Social features: reviews, ratings, friend lists

Quality Control & Acceptance Checklists

Pre-Submission Quality Control Checklist

Before submitting, confirm all of the following:

- All 13 sections/pages are built and functional.
- No console errors or broken links on any page.
- Play Zone section displays all 3 game cards (Memory Matrix, Quiz Quest, Cyber Runner).
- Clicking any Play Zone card opens the "Coming Soon" modal correctly.
- Modal closes on button click and on overlay click.
- Wishlist add/remove/persist works correctly via local storage.
- Game Details page loads correctly for each game via route /game/:id, with exactly 4 screenshots per game in the Media Gallery.
- Responsive layout verified on mobile ($\geq 320\text{px}$), tablet ($\geq 768\text{px}$), and desktop ($\geq 1280\text{px}$).
- All fictional game data is loaded from JSON files — not hardcoded in components.
- All fonts (Orbitron, Poppins) load correctly, with H1/H2/H3 sizes matching the Typographic Hierarchy ratios.
- Color palette matches the approved hex codes throughout.
- All spacing, margins, and gutters follow the 8px Spacing System.
- Exactly 10 game concepts present (no more, no fewer), matching the approved list exactly.
- All named deliverable files follow the required GV_ naming convention.
- GitHub repository is public with a clean commit history.
- Vercel deployment URL is live, publicly accessible, and error-free.
- README.md includes setup, run, build, and deployment instructions.

Acceptance Checklist

The delivery is complete **only if every item passes**:

- All 13 platform sections render with no layout breaks at any of the three defined breakpoints (320px, 768px, 1280px) — "no layout break" means: no horizontal scrollbar, no text or interactive element clipped or overlapping its container, and no element extending outside its parent container at 100% browser zoom.
- Hero carousel auto-plays and supports manual navigation with at least 3 featured games.
- All collection sliders scroll horizontally with Swiper.js.
- Play Zone section displays all 3 game cards with correct title, genre, and description.
- "Coming Soon" modal appears on clicking any Play Zone card and dismisses correctly.
- Wishlist persists correctly across browser refresh using local storage.
- Game Details page displays full information for every one of the 10 games in the JSON file, including exactly 4 screenshots each.
- Framer Motion animations are present on page transitions, card entrances, and modal open/close.
- No real game titles, copyrighted artwork, or licensed IP appears anywhere.
- Live Vercel URL is functional with no 404s or build errors.
- Source code is organized per the specified folder structure.
- README covers all steps to run the project locally.

- All margins, paddings, and gaps are multiples of 8px per the Spacing System.
- H1/H2/H3 heading sizes follow the Typographic Hierarchy ratios ($\geq 2.5\times$ / $\geq 1.75\times$ / $\geq 1.25\times$ body text).

Evaluation Criteria

Criterion	Definition
Visual Quality	Dark futuristic theme applied consistently using the specified color palette, 8px Spacing System, and Typographic Hierarchy ratios.
Responsiveness	Layout adapts correctly to mobile, tablet, and desktop without overflow or broken elements (per the "no layout break" definition above).
Feature Completeness	All 13 sections and pages present and functional including the Play Zone.
Play Zone Implementation	Cards visually distinct with "coming soon" treatment; modal smooth, dismissible, using specified colors/typography.
Code Quality	Components clean, reusable, logically organized; SCSS variables for theming; no hardcoded values; each file under 200 lines.
Data Architecture	All game and Play Zone content driven by local JSON files, with exactly 10 games and 3 Play Zone entries.
Wishlist Functionality	Add, remove, and persistence work correctly and consistently across pages.
Animation Quality	Swiper.js sliders, Framer Motion transitions, and modal animations present on every page transition, card entrance, and modal open/close.
Originality	No real game IP, no copied platform layouts, all artwork is royalty-free or original.

SECTION 13

Deliverables & Success Metrics

Deliverables

#	Item	Format	Notes
1	Complete React Application Source Code	.zip / GitHub	Organized folder structure, commented code
2	Live Vercel Deployment	URL	Fully functional, publicly accessible
3	GitHub Repository	URL	Public repo with clean commit history
4	Local JSON Data Files	.json	Exactly 10 fictional games + 3 Play Zone entries + Newsroom (min 8 entries)
5	UI Assets — Game Cover Images	.png / .jpg	Exactly 10 images (1 per game); min 1200×675px; under 300KB each

6	UI Assets — Game Screenshots	.png / .jpg	Exactly 4 per game (40 total); min 1280×720px each
7	UI Assets — Play Zone Artwork	.png / .jpg	Exactly 3 images (1 per Play Zone game); min 1200×675px
8	UI Assets — Genre Grid Artwork	.png / .jpg	Exactly 10 images (1 per genre); min 800×800px
9	Project Documentation	README.m d	Setup, run, build, and deployment instructions

Icons used in the UI must be sourced from the React Icons library — no separate custom icon files required as deliverables.

File Naming Convention

All delivered files must follow this exact pattern:

`GV_[item-name]_[version]_[YYYY-MM-DD].[ext]`

PREFIX is always GV for every delivered file.

Example: `GV_source-code_v1-0_2026-06-20.zip`

- PREFIX is always GV.
- Use lowercase kebab-case.
- No spaces. No alternate naming structures.
- Individual UI asset files inside the project folder (src/data/games.json, image files inside public/assets/images/) follow standard descriptive lowercase-kebab-case names (e.g., shadow-protocol-cover.jpg) — NOT the GV_ prefix pattern.

Success Metrics

- All 13 platform sections implemented and functional.
- Wishlist persists correctly across browser sessions via Local Storage.
- Fully responsive with no layout breakage at 375px, 768px, and 1280px viewports.
- Zero console errors in production build.
- Vercel deployment live and publicly accessible.
- All 10 original game concepts present with full detail pages (including exactly 4 screenshots each).
- H1/H2/H3 heading sizes follow the Typographic Hierarchy ratios ($\geq 2.5\times$ / $\geq 1.75\times$ / $\geq 1.25\times$ body text).
- All spacing, margins, and gutters are multiples of 8px per the Spacing System.
- Newsroom JSON contains a minimum of 8 entries (at least 2 per sub-section).
- All named deliverable files follow the GV_ naming convention.
- Each component file is under 200 lines; all hex values stored in SCSS variables.

Delivery Terms

Term	Details
Revisions included	1 round of minor revisions after delivery

Allowed revision types	Color adjustments, text/copy changes, card layout tweaks, spacing corrections, modal copy changes
Not a revision	Adding new pages/sections, changing the tech stack, redesigning the overall theme, implementing backend features, building actual playable games
Delivery method	GitHub repository link (public) + live Vercel URL + ZIP of source code (if requested)
Timeline	Within the agreed 7–10 day timeline
